

# Worksheet: Conservation of Momentum

## CHAPTER 10: Momentum

$$p = mv$$

$$P_{\text{before}} = P_{\text{after}} \quad \text{net momentum before} = \text{net momentum after}$$

$$(m_1v_1 + m_2v_2)_{\text{before}} = (m_1v_1 + m_2v_2)_{\text{after}}$$

1. When these two freight cars of different mass collide and couple, what will be their resultant velocity?

$$P_{\text{before}} = (10,000\text{kg} * 4.0\text{m/s}) + (30,000\text{kg} * 0.0\text{m/s}) = 40,000\text{kg} * \text{m/s}$$

$$P_{\text{before}} = P_{\text{after}} = 40,000\text{kg} * \text{m/s}$$

$$P_{\text{after}} = \text{Combined mass} * \text{velocity}$$

$$P_{\text{after}} = (10,000\text{kg} + 30,000\text{kg}) * v$$

$$v = (40,000\text{kg} * \text{m/s}) / 40,000\text{kg} = 1.0\text{m/s}$$

2. A 2 kg blob of putty moving at 4 m/s slams into a 6 kg blob of putty at rest. What is the speed of the two stuck-together blobs immediately after colliding?

$$P_{\text{before}} = (2.0\text{kg} * 4.0\text{m/s}) + (6.0\text{kg} * 0.0\text{m/s}) =$$

$$8.0\text{kg} * \text{m/s}$$

$$P_{\text{before}} = P_{\text{after}}$$

**AND**

$$P_{\text{after}} = \text{Combined mass} * \text{velocity} \dots P_{\text{after}} = (2.0\text{kg} + 6.0\text{kg}) * v = 8.0\text{kg} * \text{m/s}$$

**THEREFORE**

$$\text{Velocity} = P_{\text{after}} / \text{combined mass} \dots v = (8.0\text{kg} * \text{m/s}) / 8.0\text{kg}$$

$$v = 1.0\text{m/s}$$

3. A football player runs at 8 m/s and plows into a 80 kg referee standing on the field causing the referee to fly forward at 5.0 m/s. What would the mass of football player be?

*What do we know????  $P_{before} = P_{after}$*

*$P$  of referee before =  $80\text{kg} * 0\text{m/s} = 0\text{kg} * \text{m/s}$*

*$P$  of player before =  $\text{mass} * 8\text{m/s} = ?\text{kg} * \text{m/s}$*

*We cannot figure out the total momentum (before) of the system with this information.*

*Therefore, let's look at after.*

*$P_{before} = P_{after}$*

*$P$  of referee after =  $80\text{kg} * 5.0\text{m/s} = 400\text{kg} * \text{m/s}$*

*$P$  of player after =  $\text{mass} * 0.0\text{m/s} = 0\text{kg} * \text{m/s}$*

*$P_{total} = 400\text{kg} * \text{m/s} + 0.0\text{kg} * \text{m/s} = 400\text{kg} * \text{m/s}$*

*NOW we know that the total momentum of the system before is  $400\text{kg} * \text{m/s}$  because  $P_{before} = P_{after}$  Now lets go back and see if we can figure out the players mass.*

*We know the  $p_{total} = p_{player} + p_{referee}$  We know that  $p_{referee}$  is  $0\text{kg} * \text{m/s}$  and the  $p_{total}$  is  $400\text{kg} * \text{m/s}$  so let's plug it in.*

*$400\text{kg} * \text{m/s} = p_{player} + 0\text{kg} * \text{m/s} \rightarrow p_{player} = 400\text{kg} * \text{m/s}$*

*Because we know  $p_{player} = m_{player} * v_{player} \rightarrow 400\text{kg} * \text{m/s} = m_{player} * 8\text{m/s} \rightarrow$*

*$m_{player} = \frac{400\text{kg} * \text{m/s}}{8\text{m/s}} = 50\text{kg}$*

What is the velocity of the "8" ball after the collision below?

*Since the balls have the same mass, the "8" ball has a velocity of  $0.0\text{m/s}$  before the collision, AND the cue ball has a velocity of  $0.0\text{m/s}$  after the collision, then 100% of the cue ball's momentum is transferred to the "8". Therefore, the "8" ball has a velocity of  $2.0\text{m/s}$ .*
